This is to extend our recommendation and appreciation for Achintya Jha, for his work in the field of mental health and sentiment analysis. He has developed a machine learning model capable of detecting depression from text. After extensive research on sentiment analysis, he has come up with a web application for users to detect depression. His research project also offers an accuracy of over 96% and has performed successfully in multiple tests over many months. His passion to give back to the society is backed by his efforts which are remarkable.

I have known Achintya for the past 2 years as an enthusiastic student and an intern at our organization. During his time at HappyPlus Consulting, he has contributed to our work on mental health to his best capabilities. He has always shown immense interest in the intersection of technology and mental health. Accordingly, I am writing this because it is my sincere belief that he is an excellent student working to give back to the society, and I wish him all the best.

Yours sincerely,

Dr. Ashish Ambasta

CEO, HappyPlus Consulting
